

Product information

EGR valve cleaningkit

The EGR (Exhaust Gas Recirculation) valve is an emission control device which is placed in the exhaust collector and regulates the burned gases back to the intake manifold. The purpose of the EGR valve is to reduce the NOx.

The problem

When the EGR valve, by assessment of soot and sludge , cannot breath normally then serious problems may arise. Problems such as:

- " Reduced engine performance
- " Poor idle
- " Higher fuel consumption
- " Acceleration loss
- " Increase in harmful emissions (NOx)

The engine could even go into emergency mode with replacing expensive parts due !

The solution

Bardahl EGR valve cleaning kit

Benefits

- " Removes are: carbon, gum and other deposits
- " Bardahl delivers a complete kit that EGR valve (and possibly gas valves) intake pipe cleaning.
- " Restores the circulation of air in the combustion chamber.
- " Reduces fuel consumption.
- " Prevents costly repairs / replacement parts.
- " Easy to use.
- " Suitable for diesel particulate filters and catalytic converters

User

After this treatment is recommended every 5000km Bardahl Common Rail Diesel Injector Cleaner be added to the fuel for long-lasting protection.

Note:

An EGR valve with a mechanical failure cannot be repaired with the cleaning kit. Replacement will be the only solution.
