

Manual Gear Box Stop Leak

Bardahl Manual Gear Box Stop Leak restores the original properties of O-ring gaskets (rubber or neoprene) intern or extern to the manual gearbox. It stops leaks and seepage and reduces the wear of the gearbox. In some cases, it prevents from changing very expensive parts.

The action

Bardahl Manual Gear Box Stop Leak can be used with any manual gearbox oil. It regenerates and softens hardened or shrunk gaskets and increases their volume by up to 70%. This allows to stop or prevent leaks with no need for dismantling.

This product can be used:

- As a detergent product, it cleans the gasket grooves
- Restores the oil performance by adding new additives and therefore increases the lifespan of mechanical parts.
- Stops seepage.
- Resists high temperature and pressure.

It does not repair split or broken gaskets and is not effective on paper gaskets.
