

## Drive shaft covers and wheelhouse covers

Bardahl is a rock-solid brand when it comes to supplying lubricants, in whatever form. The ash covers with the accompanying CV-like fat are of course of the same high quality as you are used to from us. The CV-like grease provides protection against rust, corrosion and wear. Even at high temperatures and after long service life, the material remains smooth. Oil, dirt, moisture etc. do not get a chance to penetrate the cover.

### Why are drive shaft covers heavily loaded?

---

It is of great importance to check drive shafts, CV joints and drive covers during maintenance and / or a.p.k. for wear and damage. Especially the stronger (diesel) engines with their enormous torque ensure that these parts are heavily, and increasingly heavily, loaded. Telescopic drive shafts give a high load to the precisely fitting covers, due to irregular in- and out of feathers. It is precisely with a universal cover that this space can be provided. Drive shaft covers that are in the right condition protect, expensive, parts.

### Why replace axle covers in time?

---

(Drive) axles are designed to last the entire life of the car. However, in practice it appears that drive shaft covers in poor condition are not always replaced preventively. Replacing it on time prevents a lot of (financial) misery and keeps the customer satisfied. The drive shafts and CV joints will only continue to function properly if they remain free of dirt, oil and moisture. A good seal and low wear factor contribute to a long and trouble-free service life of the shafts and CV joints.

### Which covers does Bardahl supply?

---

Bardahl supplies axle covers for passenger cars, and a cover for wheelhouses and 4x4/SUVs. The latter has a perfect semi-fit for Volkswagen Audi. And furthermore for about 95% for the remaining fleet. All equipped with sealing rings and right quality CV-kint grease. with MoS2.

Also available is a cover mounting unit (made of plastic or compressed air) for the fast and safe mounting of the drive shaft covers.
