

Barrier Cream

Bardahl Barrier Cream is a long-acting universally applicable hand cream, also known as the invisible glove. It does not feel greasy, offers a silicone-free hand protection, which easily spreads and retracts.

Bardahl Barrier Cream is made up of natural raw materials that are dermatologically and toxicologically safe. It is a universal protection against both water-soluble and water-insoluble harmful substances. This is mainly achieved by the unique combination of polymer-based raw materials. In addition to this special protection system, **Bardahl Barrier Cream** also contains caring ingredients and also the natural α -Bisabolol, the active substance of chamomile, an anti-inflammatory. **Bardahl Barrier Cream** contains no mineral oils, silicones or substances derived from them and no preservatives.

Bardahl Barrier Cream is applied where many different active ingredients must be taken into account; this caring cream is sufficient. It also ensures proper care of the hands. It prevents a direct contact of harmful active ingredients with the skin and the penetration of contaminants deep into the skin. It reduces the load on the skin and protects against any allergies. As a result, the cleansing process of the most serious contaminants is substantially simplified, again a reduced load on the skin.

A consistent use of this hand cream will ensure fewer irritations of the skin and in extreme cases also less absenteeism.

Bardahl Barrier Cream protects against moisture, cold, heat but also against all kinds of solvents, acids, alkalis, oils, fats, lubricants, tar, bitumen, paint, ink, cement, lime, glue, PU sealants, sealants, rust, dyes and many other substances harmful to the hands.

Bardahl Barrier Cream is dermatologically tested, pH skin neutral and has been extensively tested in practice.

Manual

Put a little cream on the hands and rub well, paying particular attention to the critical places such as the cuticles. The skin will continue to breathe when using this cream and will not dry out. Depending on the load, the protection remains present for a longer period of time even after washing.

Components

- Aqua,
- Glyceryl Stearate,
- Sorbitol,
- Myristyl Lactate,
- Triacontanyl PVP,
- Cetareth-20,
- Cetearyl Alcohol,
- Cetareth-12,
- Cetyl Palmitate,
- Guar Hydroxypropyl Trimonium,
- Chloride, Bisabolol,
- Parfum,
- Sodium Diethylenetriamine Pentamethylene Phosphonate,
- Benzyl Alcohol,
- Benzoic Acid,
- Dehydroacetic Acid.

Legal provision for skin and hand cleansers

Skin and hand sanitizers are under the control of the Cosmetic Directive 76/768/EWG. The Cosmetic Directive expects manufacturers of cosmetic products to unconditionally adhere to the provision that only products that are harmless to the user are placed on the market. This must be proven for each new cosmetic product by means of an individual safety report.

According to European law, cosmetic products are therefore not classified as dangerous goods and therefore do not need a safety data sheet.

Bardahl Barrier Cream is registered with the CPNP (Cosmetic Products Notification Portal). Regulation EC No 1223/2009, under number 1452097 (Industry No 60500).
