

## Electrical Contact Cleaner

**Bardahl Electrical Contact Cleaner** is a fast-acting and versatile cleaning agent for effectively and quickly removing stains, coatings, printing inks, or residues of oil, grease, or dirt. It improves current conduction and prevents leakage currents, voltage loss, and voltage drop. The product is safe for lacquered surfaces, rubber, plastic, and other insulation. It quickly penetrates the parts to be treated, expelling moisture and forming a non-conductive protective film. This product leaves no residue.

**Bardahl Electrical Contact Cleaner** is not harmful and does not cause corrosion of metals. It is safe for most plastics or fibers; it evaporates quickly (advice: if in doubt, test the product on a small sample).

Suitable for cleaning electrical appliances, installations, and other fragile equipment without leaving residues. When spraying, a colorless spray of a rapidly evaporating solvent is created.

Protects all high-voltage wiring from weather influences. Prevents spark discharge of ignition wires and connectors. This product keeps ignition systems in top condition, ensures a quick and smooth start of an engine in wet or cold weather, and reduces the chance of engine skipping. It prevents leakage currents, especially in old wiring, and thus reduces power loss.

**Bardahl Electrical Contact Cleaner** keeps contact points, fuses, switches, relays, cable plugs, cable connections, circuit boards, and diagnostic test equipment free of corrosion and sulfide residues. It effortlessly dissolves grease, oil, dust, and dirt and washes it away.

### Applications

---

For cars: alternator, starter motor, battery, cables, pole clamps, measuring equipment, distributors, controllers, and relays.

In the office: for air compressors, battery chargers, electric motors, hand-held power tools, pumps, welding equipment, etc. This spray can is filled with an environmentally friendly gas.
