

Foamy Lube Spray

Bardahl Foamy Lube Spray is a high-pressure lubricant for the most extreme applications and operating conditions. **Bardahl Foamy Lube Spray** is a chemical, concentrated lubricant mixture of organic metallurgical components with extraordinary high-pressure properties. In addition, it has a very great affinity for metal surfaces. Bardahl's famous formula and high-pressure additives cover metal surfaces with an unbreakable oil film with **Foamy Chain Lube**.

The problem

Many chains and guides are located in the open air or a humid environment. This increases contact with water and moisture, which promotes the formation of rust. It also means more contamination with dust, sand, etc. Rust and dirt make it more difficult for the chain to move, resulting in high wear. In addition, some chains, such as motorcycles, snowmobiles, and conveyor belts, have intricate links with narrow hard-to-reach points. Most lubricants have difficulty penetrating these points.

How it works

Bardahl Foamy Lube Spray has a creeping property that combines the unique Bardahl 'Polar Attraction' formula and the special synthetic oil, ensuring an unbreakable lubricating film.

- The creeping property allows the product to reach the hard-to-reach points. In addition, the capillary effect also ensures that the product is, as it were, pulled between the links and shafts.
- Bardahl's Polar Attraction Formula comprises extremely high-pressure components that adhere to the metal and form an unbreakable molecular, thin lubricating film. It smoothes the metal surface and reduces friction and wear.
- The friction is also improved by the high-quality synthetic oil and the polymers that ensure that the lubricant is not thrown off the metal surface.
- The oxidation components ensure that no corrosion can form, resulting in rust.
- The foaming effect ensures that the lubricant is evenly distributed over the metal surface.

After **Bardahl Foamy Lube Spray** is sprayed on the metal surface, it adheres to the metal.

Properties

- Developed for the lubrication of parts exposed to high pressures, temperatures, shocks, and vibrations.
- Protection against rust and corrosion
- Insensitive to water and flow and protects against salts, acids, dirt, dust, sand, etc.
- Extends the life of all kinds of parts, chains, open gears, locks, etc.
- Penetrates hard-to-access places
- Protects moving parts and prevents beeping

Ensures that the surface to be sprayed is first cleaned.

Bardahl Multi Parts Cleaner is excellent for this.
