

Product information

Super Spray PRO 2-Way Straw

Bardahl Super Spray is a penetrating lubricant designed to clean, penetrate, and lubricate all types of metal surfaces. This aerosol spray contains Bardahl's famous polar attraction formula to reduce friction and provide lasting lubrication.

2-Way Straw

Bardahl Super Spray PRO 2-Way Straw has a nozzle that can be used in 2 positions.

~ nozzle up to apply direct and targeted penetration oil

~ nozzle down to apply the creep oil wide. Ideal for protecting parts from corrosion.

Super Spray PRO can be completely emptied because the penetration oil can be used 360 degrees.

The problem

All metal surfaces are exposed at one time or another to corrosion and contamination by water, dirt, grime and the like. This corrosion and contaminants hinder free movement, lead to excessive wear or complete seizure. The foreign matter also sticks to regular lubricants forming sludge which prevents good lubrication. In addition, some surfaces have hard-to-reach electrical contacts. Moisture and corrosion on these contacts mean either erratic operation or complete failure.

The action

Bardahl Super Spray contains solvents, a penetrant, Bardahl's "polar attraction" formula, an anti-oxidant, and a high grade oil for superior lubrication. The solvents wash away dirt and sludge upon application, allowing Super Spray's other ingredients to reach the metal surfaces. The penetrant has low surface tension that lets it flow into tight places and carries the other ingredients with it. The anti-oxidant works chemically to prevent oxidation, the cause of rust and corrosion. Bardahl's polar attraction formula of extreme pressure agents bond to the metal providing a full time high strength molecular film to reduce further wear. Further friction protection is enhanced by the high grade oil.

After cleaning and penetrating the combination of **Bardahl Super Spray's** active ingredients displace moisture so that electrical contacts operate normally.

- Spray **Bardahl Super Spray** on rusty or corroded nuts and bolts to restore movement.
- Spray **Bardahl Super Spray** on wires and in distributor cap to reduce moisture caused shorts.
