

Exhaust Assembling Paste

Bardahl Exhaust Assembling Paste is easy to use for assembly and sealing of exhaust system joints and fittings. It serves initially as lubricant thus facilitating the assembly considerably. The product hardens by itself through exhaust heat thus forming a gas-tight seal.

It is a most effective adhesive and seals all types of exhaust pipe connections.

The product has extremely high sealing abilities

- resistant against heat after repair
- resistant against corrosion and vibrations
- provides lasting protection against dangerous carbon monoxide fumes.

Directions for use

Clean all parts from rust and grease. Apply plenty of paste to sockets, clips and clamps before assembly. The paste can be spread with a finger or a small brush. After fitting the exhaust heat will hard the paste and form a durable leak proof seal.

Operating temperature: approx.: 600°C
Short peak temperatures up to: max.1000°C
