

## Foamy Lube Spray

**Bardahl Foamy Lube Spray** is scientifically formulated, long lasting, extreme pressure lubrication which operates under the most severe pressure and abrasive conditions. This product is developed as industrial Chain Lubricant but is also suitable for a numerous of other applications. It contains Bardahl's famous "Polar attraction" formula to reduce friction.

### Properties

- Penetrates in accessible areas
- Repels and protects against water, moisture, salt, alkalis acids, dirt, dust, sand, etc.
- Developed for lubrication of parts subject to high pressure, shocks and vibrations.
- Protects moving parts and prevents squeaks

### The problem

Many chains are open to the air, this increases their contact with water and dampness and encourages corrosion. It also means more chance of fouling with dust, sand, road grime and the like. Corrosion and dirt hinder chain movement and lead to excess wear.

In addition, some chains – conveyor and drive chains – have intricate links with tight, hard-to-reach spaces. Regular lubricants don't penetrate these spaces easily and eventually tend to squeeze out.

### The action

**Bardahl Foamy Lube Spray** contains a penetrating property, Bardahl's "Polar attraction" formula, an anti-oxidant, and a combination of high-grade oil and unique polymer for cushion lubrication. This product is safe for o-rings.

- The penetrating property has low surface tension that lets it flow into tight spaces; capillary action actually draws it into areas between link side plates.
- Bardahl's polar attraction formula is compounded of extreme pressure agents that bond to metal, forming a high-strength molecular film. It smoothes metal surfaces, reducing friction and wear.
- Friction protection is enhanced by the high-grade oil and polymer; once applied, won't fling off.
- The anti-oxidant works chemically to prevent oxidation, the cause of rust and other corrosion.
- The foaming agents allows for even application and prevents annoying overspray.

## Product information

---

After penetrating, **Bardahl Foamy Lube** clings, leaving a lasting coating that cuts friction, protects against corrosion and grime, and repels moisture. Ensures that the surface to spray is cleaned firstly. **Bardahl Multi Parts Cleaner** is very arranged for cleaning this.
