

Product information

Coolant -35°C *Winter storage*

BIOLOGISCH
AFBREEKBAAR

Coolant Winter storage prevents freezing of all inter-cooling systems on board each ship. This product is biodegradable, non-toxic and contains anti-corrosion ingredients employed to -35°C. Protected metals and alloys in the system from corrosion.

Applications

To be used for all in-and outboard engines.

Compatibility and miscibility

Coolant Winter storage is compatible with most other heat transfer fluids based on propylene glycol. The exclusive use is recommended for optimum corrosion protection. Coolant winter storage should be diluted with clear, colorless and odorless water which meets these requirements only

Total hardness:	max 2,8 ° dH (German hardness)
Chlorides (Cl-):	up to 50 mg / l
Iron and copper concentration:	max 0.5 mg / l
Electrical conductivity:	max 10 mS / cm at 20°C pH: 5-7

Storage

Ambient temperatures above 35°C and exposure to direct sunlight should be avoided. As with any refrigerant, the use of galvanized steel is not recommended for pipes, ductwork and other parts of the storage / mixing plant.
