

Product information

Oil Sorb recyclable

Very effective mineral absorption grains which can absorb oil and even his recycle this. These absorption grains have a perfect-slip effect. The basic material is natural clay, without any chemical additives. The grains are between 0.6 mm and 1.3 mm. 1kg granules is suitable for about 45m² floor area (at re-use). The absorption and retention capacity is absolute huge.

Recyclable?

After the grains are sufficiently spread at the oil, they need to be swept back and forth. This should be done until the grains (on the outside) is dry so the liquid is absorbed completely.

These grains now can be placed back in the bucket until they are needed again. The darker the color of the grain, the more it is saturated. At a particular moment they do not absorb any liquid anymore.

Officially tested allowed in Germany by the MPA*. (Material Prüfungs Amt in Dortmund)

Artikelnummer	95061
Content	16 litres in a bucket (+/- 10kg)
