

Anti Spatter/welding spray

(Welding Spray)

Bardahl Anti Spatter is a water-based welding spray that prevents welding splashes from sticking to the workpiece and tools. The product does not burn and does not form a gum when heated. In addition, it temporarily protects against corrosion formation.

- It is economical in use
- Extends the life of the welding nozzle
- Ensures an even free gas flow
- No adverse effect when laying a weld
- Contains no silicones
- Odorless

If the welded part has been cleaned, it can be painted or sprayed without any problem. Also for galvanizing no adverse effects.

Application

If the product is sprayed on the nozzle of the welding machine, on the mold, the part, the workpiece clamps and other attachments, it prevents the splashes from welding from adhering.

Manual

Shake can before use and hold upright. Spray a thin film on the parts to be protected. When spraying, foam forms, which, however, quickly disappears and leaves a thin even layer. For the welding nozzle, apply the welding spray from approx. .15 cm

Attention

- This spray can does not contain a flammable propellant
- Inside the bus there is a cartridge with compressed air.
- Contains no chlorocarbons, solvents or acids.
